

### Comments:

The team was able to successfully achieve the goals for this sprint. This can be seen the red line being below the grey line on March 12. However, the red line being above the grey line for the majority of the duration of the sprint indicates that the team was behind schedule during the sprint and had to catch up on tasks.

### Velocity Comparison:

Sprint 2 Velocity: 68

Sprint 3 Velocity: 51

### Why did velocity change?

Ans: Sprint 3 velocity decreased because in Sprint 2, we had to take on additional tasks to fix the bugs that we came across. This increased Sprint 2 velocity considerably; however, it prevented the bugs from accumulating and allowing us to solely focus on building more features of the video editor in Sprint 3.
