

Comments:

The team was able to complete all but 1 task. This can be seen by the red line being above the grey line at the end of the sprint. This indicates that the team over committed to the current sprint and hence fell slightly short.

Velocity Comparison: Sprint 3 Velocity: 51

Sprint 4 (planned) Velocity: 36, We were able to achieve 28.

Why did velocity change?

Ans: Sprint 4 velocity decreased because we had completed most of the tasks in the earlier sprint. This was done to account for the less time available to each team member due to end of semester workload.
